E-Commerce

This is an E-Commerce website that has users and sellers. This project will aim to use user interaction with the website to benefit the user with recommendation, so the more the user uses the website the more the recommendations become more accurate.

and we use the multiple user accounts to help the website connect a relation between age, location, purchases, and history.

- it will **recommend** based on multiple relations and attributes like:
 1. Customer Buys The Product
 2. Seller Sells The Product
 3. Customer Relation with the seller
 4. Customer recursive relation with Age Group
 5. Customer Recursive relation with View History
 6. Customer View Product
 7. Customer Bookmark Product
 8. Seller Offer on Product
