E-Commerce

This is an E-Commerece website that has users and sellers This project will aim to use user interaction with the website to benifit the user with recommendation, so the more the user
uses the website the more the recommendations become more accurate.
and we use the multpli user accounts to help the website connect a relation between age, location, purachases, and history.

- it will **recommend** based on multiple relations and attributes like:

1. Customer Buys The Product
2. Seller Sells The Product
3. Customer Realation with the seller
4. Customer recursive realation with Age Group
5. Customer Recursive realation with View History
6. Customer View Product
7. Customer Bookmark Product
8. Seller Offer on Product
